FINAL REPORTS OF THE 1958 CENSUS OF MANUFACTURES

AREA REPORTS--Each report contains an introductory text and the following data for each State or area for 1958: statistics on value of shipments, value added by manufacture, employment, payrolls, man-hours, new capital expenditures, and number of manufacturing establishments for important industries and industry groups, with historical comparisons. For the State's important metropolitan statistical areas and larger counties, similar data are shown by industry groups. Totals for all manufacturing industries are shown for the items listed above (except value of shipments) for all counties, standard metropolitan statistical areas, and cities with 10,000 or more population. The number of establishments in each major industry group is presented by size of establishment within county. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

INDUSTRY REPORTS--Each report contains an introductory text and data for groups of related manufacturing industries showing for each industry for 1958: statistics on detailed product shipments and materials consumption in terms of quantity and value, cost of fuels and electric energy, value added by manufacture, employment, payrolls, man-hours, inventories, new capital expenditures, and number of manufacturing establishments. Selected statistics are included for earlier census years. Value of shipments, cost of materials, capital expenditures, and employment and payroll data are shown for each industry by geographic region and State. Number of employees, value added by manufacture, and number of establishments are shown by size class of establishment within industry. Data are provided on selected measures for specialized product plants. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

SUBJECT REPORTS--Each report contains introductory text and detailed statistics for an individual subject, such as size of establishments, inventories, new capital expenditures, fuels and electric energy, and important materials consumed.

VOLUMES--The Industry, Area, and Subject reports described above will be assembled and issued as three separately bound volumes, together with full explanatory texts and appendixes. In addition, there will be a general summary chapter in each of the volumes, summary statistics chapters for major industry groups in the Industry Volume, and summary statistics chapters for geographic divisions in the Area Volume.

SPECIAL REPORTS--In addition to the reports described above, a series of special reports will also be issued. These reports will cover: the number of manufacturing plants classified by 4-digit industry, county, and employment size; indexes of physical volume of production; and other subjects to be announced at a later date.

Library of Congress Card No. A61-9403

SUGGESTED CITATION

U. S. Bureau of the Census. *U. S. Census of Manufactures: 1958.*
Location of manufacturing plants by county, industry, and employment size,
Part 1.—New England States, Special Report MC58(S)-3.1.
U. S. Government Printing Office, Washington, D. C., 1961

Foreword

This series of publications presents Census information for each of approximately 3,100 different counties, showing in detail the 4-digit Standard Industrial Classification code and employment size class of each manufacturing plant in the specified industry. The series consists of 9 separate reports each of which encompasses all of the States and counties in one of the 9 Census geographic divisions. Previously, another series of reports, also in nine parts, presented the same information arranged by industry with State and county as the subordinate classification structure.

In the Census volumes, actual figures on employment and other measures cannot be published in such area-industry-size precision without disclosing figures for individual companies. Accordingly, these two series of publications fill in many of the data gaps necessarily arising in the regular 1958 Census of Manufactures published tables. For many analytical purposes, aggregates are not needed. Instead, the detailed count of manufacturing plants in this publication, cross classified by county, industry, and size provides a revealing picture that will be useful to: (a) those involved in economic development programs at the regional, State, and local area levels; (b) those engaged in industrial market analyses or allocation of sales territories; and (c) those concerned with industrial dispersion, regional shifts of industry, and similar problems.

Acknowledgments

The nine parts of this report constitute an addition to the series initiated with the publication of the Location of Manufacturing Plants data in industry by county sequence based on the 1954 Census of Manufactures. It was followed by a similar set of releases based on the 1958 Census of Manufactures. This is the first time, however, that the data are being published in county by industry sequence. The Area Redevelopment Administration has provided the necessary financial assistance for making possible the publication of the 1958 data in county by industry sequence.

The Location of Manufacturing Plants reports for 1958 were prepared by the Bureau of the Census from the basic computer records which had been used for the standard Census Industry and Area reports. These "Location" reports were planned and readied for publication in the Industry Division under the general supervision of Irving Rottenberg by Arthur W. Horowitz, Chief, Establishment Statistics. The review of the 1958 industry and geographic data for completeness and accuracy was a division-wide effort with the bulk of the work performed in the following commodity areas: Foods, Edward A. Robinson, Chief; Textiles, Milton Eisen, Chief; Apparel, Shirley Kallek, Chief; Lumber and Furniture, Elmer S. Biles, Chief; Paper, Printing, and Publishing, Edward D. Gruen, Chief; Chemicals, Reese R. Morgan, Chief; Metal and Metal Products, Paul F. Berard, Chief; Machinery, William R. Gray, Chief; and Electrical Machinery and Transportation Equipment, Bernard P. Bernsten, Chief. The Foods, Textiles, and Apparel areas were under the general supervision of Willis K. Jordan; the Lumber, Paper, and Chemicals area under Cyril M. Wildes; and the Metals, Machinery, and Transportation Equipment industries under Clarence H. Olsen. The application of the system of the industrial classification of establishments was coordinated by Irvin Strauss in the later stages of the census and by Isidore Bogdanoff during the earlier period. Staff assistance in statistical methods and sampling was provided by Jack L. Ogus, Assistant Division Chief for Research and Methodology.

Processing of the Census of Manufactures reports was performed in the Economic Operations Division under the supervision of Irving Weiss, Assistant Chief, Processing, assisted by Max E. Van Horn, Charles Merzel, Donald E. Young, and Wesley R. Grier. Systems and procedures were developed under the supervision of Sol Dolleck, Assistant Chief, Systems, assisted by Samuel Schweid on methods evaluation and determination, Jack Margolis on liaison and systems development, Nathan Lesowitz on development and preparation of operating procedures, and Jack Scharff, assisted by Eugene L. Wendt, on the development and supervision of electronic computer programming. Quality control plans and procedures were developed and supervised by Herman H. Fasteau, assisted by George Minton and Alfred J. McKeon. Scheduling, progress reporting, and related staff work were supervised by Wilbur J. Mathias and Margaret R. Rommel.

How To Use This Publication

The number of manufacturing plants is presented in State, county, and industry sequence, by employment size. A brief description of each of these elements is given below to assist the reader in using the tables which follow:

1. The States are arranged in groups which conform to the Census Bureau regional groupings used in other Census publications. Only the Continental U.S. is included in this report. Alaska and Hawaii are not included since they did not achieve Statehood until 1959. The Census regional-State sequence is shown below:

New England	West North Central	West South Central
Maine	Minnesota	Arkansas
New Hampshire	Iowa	Louisiana
Vermont	Missouri	Oklahoma
Massachusetts	North Dakota	Texas
Rhode Island	South Dakota	
Connecticut	Nebraska	
	Kansas	

Middle Atlantic	South Atlantic	Mountain
New York	Delaware	Montana
New Jersey	Maryland	Idaho
Pennsylvania	District of Columbia	Wyoming
	Virginia	Colorado
	West Virginia	New Mexico
	North Carolina	Arizona
	South Carolina	Utah
	Georgia	Nevada
	Florida	

East North Central	East South Central	Pacific
Ohio	Kentucky	Washington
Indiana	Tennessee	Oregon
Illinois	Alabama	California
Michigan	Mississippi	
Wisconsin		

2. All counties having one or more manufacturing plants appear in alphabetical sequence within each State. Related statistics for the county (such as employment, payroll, man-hours, value added by manufacture and capital expenditures) are available in the 1958 Census of Manufactures, Volume III, Area Statistics.

3. The industries included in this report appear in the "Standard Industrial Classification" (4-digit code) sequence, as published in the 1958 Census of Manufactures. A full description of each industry, its processes, and its products appears in Volume II, Industry Statistics, of the 1958 Census. In addition, a convenient summary description of each industry appears in Appendix A of Volume I, Summary Statistics, and Volume III, Area Statistics. A detailed explanation of the background, procedures, and concepts in taking the census may be found in the Introduction of any of the 1958 Census of Manufactures volumes.

4. The employment size class assigned to each plant is based on the "average" 1958 employment total reported by the plant. Both "production workers" and "all other employees" at the manufacturing plant are included in this total figure. The plant employment figure is composed of an average of four monthly figures (March, May, August, and November) for "production workers" plus the March figure for "all other employees." The employment size classes do not, therefore, represent "maximum" or "anticipated" employment size but are approximations to the annual average for 1958.

5. Average employment by industry-employment size class—As an aid in using the data in this release, average employment figures were calculated (based on data previously published in 1958 Census of Manufactures reports) for each industry-employment size class. These figures are shown in the Appendix to this report.

APPENDIX

Average Employment by Industry and Size Class for Industry Groups

(The figures shown in the table below were derived from employment and establishment figures previously published in the 1958 Census of Manufactures industry report table, "Selected Statistics for Manufacturing Establishments, Classified by Employment Size." These averages were compiled to serve as an aid in using and interpreting the size class statistics shown in this report.

Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted, and the combined figure has been underlined and shown in the size class to the left. The underlined average employment figure, therefore, represents an average for two or more size classes)

Code	Industry	Average employment per establishment for--							
		All establishments	Plants with--

FINAL REPORTS OF THE 1958 CENSUS OF MANUFACTURES

AREA REPORTS--Each report contains an introductory text and the following data for each State or area for 1958: statistics on value of shipments, value added by manufacture, employment, payrolls, man-hours, new capital expenditures, and number of manufacturing establishments for important industries and industry groups, with historical comparisons. For the State's important metropolitan statistical areas and larger counties, similar data are shown by industry groups. Totals for all manufacturing industries are shown for the items listed above (except value of shipments) for all counties, standard metropolitan statistical areas, and cities with 10,000 or more population. The number of establishments in each major industry group is presented by size of establishment within county. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

INDUSTRY REPORTS--Each report contains an introductory text and data for groups of related manufacturing industries showing for each industry for 1958: statistics on detailed product shipments and materials consumption in terms of quantity and value, cost of fuels and electric energy, value added by manufacture, employment, payrolls, man-hours, inventories, new capital expenditures, and number of manufacturing establishments. Selected statistics are included for earlier census years. Value of shipments, cost of materials, capital expenditures, and employment and payroll data are shown for each industry by geographic region and State. Number of employees, value added by manufacture, and number of establishments are shown by size class of establishment within industry. Data are provided on selected measures for specialized product plants. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

SUBJECT REPORTS--Each report contains introductory text and detailed statistics for an individual subject, such as size of establishments, inventories, new capital expenditures, fuels and electric energy, and important materials consumed.

VOLUMES--The Industry, Area, and Subject reports described above will be assembled and issued as three separately bound volumes, together with full explanatory texts and appendixes. In addition, there will be a general summary chapter in each of the volumes, summary statistics chapters for major industry groups in the Industry Volume, and summary statistics chapters for geographic divisions in the Area Volume.

SPECIAL REPORTS--In addition to the reports described above, a series of special reports will also be issued. These reports will cover: the number of manufacturing plants classified by 4-digit industry, county, and employment size; indexes of physical volume of production; and other subjects to be announced at a later date.

Library of Congress Card No. A61-9403

SUGGESTED CITATION

U. S. Bureau of the Census. *U. S. Census of Manufactures: 1958.*
Location of manufacturing plants by county, industry, and employment size,
Part 2.--Middle Atlantic States, Special Report MC58(S)-3.2.
U. S. Government Printing Office, Washington, D. C., 1961

Foreword

This series of publications presents Census information for each of approximately 3,100 different counties, showing in detail the 4-digit Standard Industrial Classification code and employment size class of each manufacturing plant in the specified industry. The series consists of 9 separate reports each of which encompasses all of the States and counties in one of the 9 Census geographic divisions. Previously, another series of reports, also in nine parts, presented the same information arranged by industry with State and county as the subordinate classification structure.

In the Census volumes, actual figures on employment and other measures cannot be published in such area-industry-size precision without disclosing figures for individual companies. Accordingly, these two series of publications fill in many of the data gaps necessarily arising in the regular 1958 Census of Manufactures published tables. For many analytical purposes, aggregates are not needed. Instead, the detailed count of manufacturing plants in this publication, cross classified by county, industry, and size provides a revealing picture that will be useful to: (a) those involved in economic development programs at the regional, State, and local area levels; (b) those engaged in industrial market analyses or allocation of sales territories; and (c) those concerned with industrial dispersion, regional shifts of industry, and similar problems.

Acknowledgments

The nine parts of this report constitute an addition to the series initiated with the publication of the Location of Manufacturing Plants data in industry by county sequence based on the 1954 Census of Manufactures. It was followed by a similar set of releases based on the 1958 Census of Manufactures. This is the first time, however, that the data are being published in county by industry sequence. The Area Redevelopment Administration has provided the necessary financial assistance for making possible the publication of the 1958 data in county by industry sequence.

The Location of Manufacturing Plants reports for 1958 were prepared by the Bureau of the Census from the basic computer records which had been used for the standard Census Industry and Area reports. These "Location" reports were planned and readied for publication in the Industry Division under the general supervision of Irving Rottenberg by Arthur W. Horowitz, Chief, Establishment Statistics. The review of the 1958 industry and geographic data for completeness and accuracy was a division-wide effort with the bulk of the work performed in the following commodity areas: Foods, Edward A. Robinson, Chief; Textiles, Milton Eisen, Chief; Apparel, Shirley Kallek, Chief; Lumber and Furniture, Elmer S. Biles, Chief; Paper, Printing, and Publishing, Edward D. Gruen, Chief; Chemicals, Reese R. Morgan, Chief; Metal and Metal Products, Paul F. Berard, Chief; Machinery, William R. Gray, Chief; and Electrical Machinery and Transportation Equipment, Bernard P. Bernsten, Chief. The Foods, Textiles, and Apparel areas were under the general supervision of Willis K. Jordan; the Lumber, Paper, and Chemicals area under Cyril M. Wildes; and the Metals, Machinery, and Transportation Equipment industries under Clarence H. Olsen. The application of the system of the industrial classification of establishments was coordinated by Irvin Strauss in the later stages of the census and by Isidore Bogdanoff during the earlier period. Staff assistance in statistical methods and sampling was provided by Jack L. Ogus, Assistant Division Chief for Research and Methodology.

Processing of the Census of Manufactures reports was performed in the Economic Operations Division under the supervision of Irving Weiss, Assistant Chief, Processing, assisted by Max E. Van Horn, Charles Merzel, Donald E. Young, and Wesley R. Grier. Systems and procedures were developed under the supervision of Sol Dolleck, Assistant Chief, Systems, assisted by Samuel Schweid on methods evaluation and determination, Jack Margolis on liaison and systems development, Nathan Lesowitz on development and preparation of operating procedures, and Jack Scharff, assisted by Eugene L. Wendt, on the development and supervision of electronic computer programming. Quality control plans and procedures were developed and supervised by Herman H. Fasteau, assisted by George Minton and Alfred J. McKeon. Scheduling, progress reporting, and related staff work were supervised by Wilbur J. Mathias and Margaret R. Rommel.

How To Use This Publication

The number of manufacturing plants is presented in State, county, and industry sequence, by employment size. A brief description of each of these elements is given below to assist the reader in using the tables which follow:

1. The States are arranged in groups which conform to the Census Bureau regional groupings used in other Census publications. Only the Continental U.S. is included in this report. Alaska and Hawaii are not included since they did not achieve Statehood until 1959. The Census regional-State sequence is shown below:

New England
- Maine
- New Hampshire
- Vermont
- Massachusetts
- Rhode Island
- Connecticut

Middle Atlantic
- New York
- New Jersey
- Pennsylvania

East North Central
- Ohio
- Indiana
- Illinois
- Michigan
- Wisconsin

West North Central
- Minnesota
- Iowa
- Missouri
- North Dakota
- South Dakota
- Nebraska
- Kansas

South Atlantic
- Delaware
- Maryland
- District of Columbia
- Virginia
- West Virginia
- North Carolina
- South Carolina
- Georgia
- Florida

East South Central
- Kentucky
- Tennessee
- Alabama
- Mississippi

West South Central
- Arkansas
- Louisiana
- Oklahoma
- Texas

Mountain
- Montana
- Idaho
- Wyoming
- Colorado
- New Mexico
- Arizona
- Utah
- Nevada

Pacific
- Washington
- Oregon
- California

2. All counties having one or more manufacturing plants appear in alphabetical sequence within each State. Related statistics for the county (such as employment, payroll, man-hours, value added by manufacture and capital expenditures) are available in the 1958 Census of Manufactures, Volume III, Area Statistics.

3. The industries included in this report appear in the "Standard Industrial Classification" (4-digit code) sequence, as published in the 1958 Census of Manufactures. A full description of each industry, its processes, and its products appears in Volume II, Industry Statistics, of the 1958 Census. In addition, a convenient summary description of each industry appears in Appendix A of Volume I, Summary Statistics, and Volume III, Area Statistics. A detailed explanation of the background, procedures, and concepts in taking the census may be found in the Introduction of any of the 1958 Census of Manufactures volumes.

4. The employment size class assigned to each plant is based on the "average" 1958 employment total reported by the plant. Both "production workers" and "all other employees" at the manufacturing plant are included in this total figure. The plant employment figure is composed of an average of four monthly figures (March, May, August, and November) for "production workers" plus the March figure for "all other employees." The employment size classes do not, therefore, represent "maximum" or "anticipated" employment size but are approximations to the annual average for 1958.

5. Average employment by industry-employment size class—As an aid in using the data in this release, average employment figures were calculated (based on data previously published in 1958 Census of Manufactures reports) for each industry-employment size class. These figures are shown in the Appendix to this report.

APPENDIX

Average Employment by Industry and Size Class for Industry Groups

(The figures shown in the table below were derived from employment and establishment figures previously published in the 1958 Census of Manufactures industry report table, "Selected Statistics for Manufacturing Establishments, Classified by Employment Size." These averages were compiled to serve as an aid in using and interpreting the size class statistics shown in this report.

Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted, and the combined figure has been underlined and shown in the size class to the left. The underlined average employment figure, therefore, represents an average for two or more size classes)

Code	Industry	Average employment per establishment for--							
		All establishments	Plants with--						
			1-19 employees	20-49 employees	50-99 employees	100-249 employees	250-499 employees	500-999 employess	1,000 or more employees

FINAL REPORTS OF THE 1958 CENSUS OF MANUFACTURES

AREA REPORTS--Each report contains an introductory text and the following data for each State or area for 1958: statistics on value of shipments, value added by manufacture, employment, payrolls, man-hours, new capital expenditures, and number of manufacturing establishments for important industries and industry groups, with historical comparisons. For the State's important metropolitan statistical areas and larger counties, similar data are shown by industry groups. Totals for all manufacturing industries are shown for the items listed above (except value of shipments) for all counties, standard metropolitan statistical areas, and cities with 10,000 or more population. The number of establishments in each major industry group is presented by size of establishment within county. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

INDUSTRY REPORTS--Each report contains an introductory text and data for groups of related manufacturing industries showing for each industry for 1958: statistics on detailed product shipments and materials consumption in terms of quantity and value, cost of fuels and electric energy, value added by manufacture, employment, payrolls, man-hours, inventories, new capital expenditures, and number of manufacturing establishments. Selected statistics are included for earlier census years. Value of shipments, cost of materials, capital expenditures, and employment and payroll data are shown for each industry by geographic region and State. Number of employees, value added by manufacture, and number of establishments are shown by size class of establishment within industry. Data are provided on selected measures for specialized product plants. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

SUBJECT REPORTS--Each report contains introductory text and detailed statistics for an individual subject, such as size of establishments, inventories, new capital expenditures, fuels and electric energy, and important materials consumed.

VOLUMES--The Industry, Area, and Subject reports described above will be assembled and issued as three separately bound volumes, together with full explanatory texts and appendixes. In addition, there will be a general summary chapter in each of the volumes, summary statistics chapters for major industry groups in the Industry Volume, and summary statistics chapters for geographic divisions in the Area Volume.

SPECIAL REPORTS--In addition to the reports described above, a series of special reports will also be issued. These reports will cover: the number of manufacturing plants classified by 4-digit industry, county, and employment size; indexes of physical volume of production; and other subjects to be announced at a later date.

Library of Congress Card No. A61-9403

SUGGESTED CITATION

U. S. Bureau of the Census. *U. S. Census of Manufactures: 1958.*
Location of manufacturing plants by county, industry, and employment size,
Part 3.--East North Central States, Special Report MC58(S)-3.3.
U. S. Government Printing Office, Washington, D. C., 1961

Foreword

This series of publications presents Census information for each of approximately 3,100 different counties, showing in detail the 4-digit Standard Industrial Classification code and employment size class of each manufacturing plant in the specified industry. The series consists of 9 separate reports each of which encompasses all of the States and counties in one of the 9 Census geographic divisions. Previously, another series of reports, also in nine parts, presented the same information arranged by industry with State and county as the subordinate classification structure.

In the Census volumes, actual figures on employment and other measures cannot be published in such area-industry-size precision without disclosing figures for individual companies. Accordingly, these two series of publications fill in many of the data gaps necessarily arising in the regular 1958 Census of Manufactures published tables. For many analytical purposes, aggregates are not needed. Instead, the detailed count of manufacturing plants in this publication, cross classified by county, industry, and size provides a revealing picture that will be useful to: (a) those involved in economic development programs at the regional, State, and local area levels; (b) those engaged in industrial market analyses or allocation of sales territories; and (c) those concerned with industrial dispersion, regional shifts of industry, and similar problems.

Acknowledgments

The nine parts of this report constitute an addition to the series initiated with the publication of the Location of Manufacturing Plants data in industry by county sequence based on the 1954 Census of Manufactures. It was followed by a similar set of releases based on the 1958 Census of Manufactures. This is the first time, however, that the data are being published in county by industry sequence. The Area Redevelopment Administration has provided the necessary financial assistance for making possible the publication of the 1958 data in county by industry sequence.

The Location of Manufacturing Plants reports for 1958 were prepared by the Bureau of the Census from the basic computer records which had been used for the standard Census Industry and Area reports. These "Location" reports were planned and readied for publication in the Industry Division under the general supervision of Irving Rottenberg by Arthur W. Horowitz, Chief, Establishment Statistics. The review of the 1958 industry and geographic data for completeness and accuracy was a division-wide effort with the bulk of the work performed in the following commodity areas: Foods, Edward A. Robinson, Chief; Textiles, Milton Eisen, Chief; Apparel, Shirley Kallek, Chief; Lumber and Furniture, Elmer S. Biles, Chief; Paper, Printing, and Publishing, Edward D. Gruen, Chief; Chemicals, Reese R. Morgan, Chief; Metal and Metal Products, Paul F. Berard, Chief; Machinery, William R. Gray, Chief; and Electrical Machinery and Transportation Equipment, Bernard P. Bernsten, Chief. The Foods, Textiles, and Apparel areas were under the general supervision of Willis K. Jordan; the Lumber, Paper, and Chemicals area under Cyril M. Wildes; and the Metals, Machinery, and Transportation Equipment industries under Clarence H. Olsen. The application of the system of the industrial classification of establishments was coordinated by Irvin Strauss in the later stages of the census and by Isidore Bogdanoff during the earlier period. Staff assistance in statistical methods and sampling was provided by Jack L. Ogus, Assistant Division Chief for Research and Methodology.

Processing of the Census of Manufactures reports was performed in the Economic Operations Division under the supervision of Irving Weiss, Assistant Chief, Processing, assisted by Max E. Van Horn, Charles Merzel, Donald E. Young, and Wesley R. Grier. Systems and procedures were developed under the supervision of Sol Dolleck, Assistant Chief, Systems, assisted by Samuel Schweid on methods evaluation and determination, Jack Margolis on liaison and systems development, Nathan Lesowitz on development and preparation of operating procedures, and Jack Scharff, assisted by Eugene L. Wendt, on the development and supervision of electronic computer programming. Quality control plans and procedures were developed and supervised by Herman H. Fasteau, assisted by George Minton and Alfred J. McKeon. Scheduling, progress reporting, and related staff work were supervised by Wilbur J. Mathias and Margaret R. Rommel.

How To Use This Publication

The number of manufacturing plants is presented in State, county, and industry sequence, by employment size. A brief description of each of these elements is given below to assist the reader in using the tables which follow:

1. The States are arranged in groups which conform to the Census Bureau regional groupings used in other Census publications. Only the Continental U.S. is included in this report. Alaska and Hawaii are not included since they did not achieve Statehood until 1959. The Census regional-State sequence is shown below:

New England	West North Central	West South Central
Maine	Minnesota	Arkansas
New Hampshire	Iowa	Louisiana
Vermont	Missouri	Oklahoma
Massachusetts	North Dakota	Texas
Rhode Island	South Dakota	
Connecticut	Nebraska	
	Kansas	

Middle Atlantic	South Atlantic	Mountain
New York	Delaware	Montana
New Jersey	Maryland	Idaho
Pennsylvania	District of Columbia	Wyoming
	Virginia	Colorado
	West Virginia	New Mexico
	North Carolina	Arizona
	South Carolina	Utah
	Georgia	Nevada
	Florida	

East North Central	East South Central	Pacific
Ohio	Kentucky	Washington
Indiana	Tennessee	Oregon
Illinois	Alabama	California
Michigan	Mississippi	
Wisconsin		

2. All counties having one or more manufacturing plants appear in alphabetical sequence within each State. Related statistics for the county (such as employment, payroll, man-hours, value added by manufacture and capital expenditures) are available in the 1958 Census of Manufactures, Volume III, Area Statistics.

3. The industries included in this report appear in the "Standard Industrial Classification" (4-digit code) sequence, as published in the 1958 Census of Manufactures. A full description of each industry, its processes, and its products appears in Volume II, Industry Statistics, of the 1958 Census. In addition, a convenient summary description of each industry appears in Appendix A of Volume I, Summary Statistics, and Volume III, Area Statistics. A detailed explanation of the background, procedures, and concepts in taking the census may be found in the Introduction of any of the 1958 Census of Manufactures volumes.

4. The employment size class assigned to each plant is based on the "average" 1958 employment total reported by the plant. Both "production workers" and "all other employees" at the manufacturing plant are included in this total figure. The plant employment figure is composed of an average of four monthly figures (March, May, August, and November) for "production workers" plus the March figure for "all other employees." The employment size classes do not, therefore, represent "maximum" or "anticipated" employment size but are approximations to the annual average for 1958.

5. Average employment by industry-employment size class—As an aid in using the data in this release, average employment figures were calculated (based on data previously published in 1958 Census of Manufactures reports) for each industry-employment size class. These figures are shown in the Appendix to this report.

APPENDIX

Average Employment by Industry and Size Class for Industry Groups

(The figures shown in the table below were derived from employment and establishment figures previously published in the 1958 Census of Manufactures industry report table, "Selected Statistics for Manufacturing Establishments, Classified by Employment Size." These averages were compiled to serve as an aid in using and interpreting the size class statistics shown in this report.

Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted, and the combined figure has been underlined and shown in the size class to the left. The underlined average employment figure, therefore, represents an average for two or more size classes)

Code	Industry	Average employment per establishment for--							
		All establishments	Plants with--

FINAL REPORTS OF THE 1958 CENSUS OF MANUFACTURES

AREA REPORTS--Each report contains an introductory text and the following data for each State or area for 1958: statistics on value of shipments, value added by manufacture, employment, payrolls, man-hours, new capital expenditures, and number of manufacturing establishments for important industries and industry groups, with historical comparisons. For the State's important metropolitan statistical areas and larger counties, similar data are shown by industry groups. Totals for all manufacturing industries are shown for the items listed above (except value of shipments) for all counties, standard metropolitan statistical areas, and cities with 10,000 or more population. The number of establishments in each major industry group is presented by size of establishment within county. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

INDUSTRY REPORTS--Each report contains an introductory text and data for groups of related manufacturing industries showing for each industry for 1958: statistics on detailed product shipments and materials consumption in terms of quantity and value, cost of fuels and electric energy, value added by manufacture, employment, payrolls, man-hours, inventories, new capital expenditures, and number of manufacturing establishments. Selected statistics are included for earlier census years. Value of shipments, cost of materials, capital expenditures, and employment and payroll data are shown for each industry by geographic region and State. Number of employees, value added by manufacture, and number of establishments are shown by size class of establishment within industry. Data are provided on selected measures for specialized product plants. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

SUBJECT REPORTS--Each report contains introductory text and detailed statistics for an individual subject, such as size of establishments, inventories, new capital expenditures, fuels and electric energy, and important materials consumed.

VOLUMES--The Industry, Area, and Subject reports described above will be assembled and issued as three separately bound volumes, together with full explanatory texts and appendixes. In addition, there will be a general summary chapter in each of the volumes, summary statistics chapters for major industry groups in the Industry Volume, and summary statistics chapters for geographic divisions in the Area Volume.

SPECIAL REPORTS--In addition to the reports described above, a series of special reports will also be issued. These reports will cover: the number of manufacturing plants classified by 4-digit industry, county, and employment size; indexes of physical volume of production; and other subjects to be announced at a later date.

Library of Congress Card No. A61-9403

SUGGESTED CITATION

U. S. Bureau of the Census. *U. S. Census of Manufactures: 1958.*
Location of manufacturing plants by county, industry, and employment size,
Part 4.--West North Central States, Special Report MC58(S)-3.4.
U. S. Government Printing Office, Washington, D. C., 1961

Foreword

This series of publications presents Census information for each of approximately 3,100 different counties, showing in detail the 4-digit Standard Industrial Classification code and employment size class of each manufacturing plant in the specified industry. The series consists of 9 separate reports each of which encompasses all of the States and counties in one of the 9 Census geographic divisions. Previously, another series of reports, also in nine parts, presented the same information arranged by industry with State and county as the subordinate classification structure.

In the Census volumes, actual figures on employment and other measures cannot be published in such area-industry-size precision without disclosing figures for individual companies. Accordingly, these two series of publications fill in many of the data gaps necessarily arising in the regular 1958 Census of Manufactures published tables. For many analytical purposes, aggregates are not needed. Instead, the detailed count of manufacturing plants in this publication, cross classified by county, industry, and size provides a revealing picture that will be useful to: (a) those involved in economic development programs at the regional, State, and local area levels; (b) those engaged in industrial market analyses or allocation of sales territories; and (c) those concerned with industrial dispersion, regional shifts of industry, and similar problems.

Acknowledgments

The nine parts of this report constitute an addition to the series initiated with the publication of the Location of Manufacturing Plants data in industry by county sequence based on the 1954 Census of Manufactures. It was followed by a similar set of releases based on the 1958 Census of Manufactures. This is the first time, however, that the data are being published in county by industry sequence. The Area Redevelopment Administration has provided the necessary financial assistance for making possible the publication of the 1958 data in county by industry sequence.

The Location of Manufacturing Plants reports for 1958 were prepared by the Bureau of the Census from the basic computer records which had been used for the standard Census Industry and Area reports. These "Location" reports were planned and readied for publication in the Industry Division under the general supervision of Irving Rottenberg by Arthur W. Horowitz, Chief, Establishment Statistics. The review of the 1958 industry and geographic data for completeness and accuracy was a division-wide effort with the bulk of the work performed in the following commodity areas: Foods, Edward A. Robinson, Chief; Textiles, Milton Eisen, Chief; Apparel, Shirley Kallek, Chief; Lumber and Furniture, Elmer S. Biles, Chief; Paper, Printing, and Publishing, Edward D. Gruen, Chief; Chemicals, Reese R. Morgan, Chief; Metal and Metal Products, Paul F. Berard, Chief; Machinery, William R. Gray, Chief; and Electrical Machinery and Transportation Equipment, Bernard P. Bernsten, Chief. The Foods, Textiles, and Apparel areas were under the general supervision of Willis K. Jordan; the Lumber, Paper, and Chemicals area under Cyril M. Wildes; and the Metals, Machinery, and Transportation Equipment industries under Clarence H. Olsen. The application of the system of the industrial classification of establishments was coordinated by Irvin Strauss in the later stages of the census and by Isidore Bogdanoff during the earlier period. Staff assistance in statistical methods and sampling was provided by Jack L. Ogus, Assistant Division Chief for Research and Methodology.

Processing of the Census of Manufactures reports was performed in the Economic Operations Division under the supervision of Irving Weiss, Assistant Chief, Processing, assisted by Max E. Van Horn, Charles Merzel, Donald E. Young, and Wesley R. Grier. Systems and procedures were developed under the supervision of Sol Dolleck, Assistant Chief, Systems, assisted by Samuel Schweid on methods evaluation and determination, Jack Margolis on liaison and systems development, Nathan Lesowitz on development and preparation of operating procedures, and Jack Scharff, assisted by Eugene L. Wendt, on the development and supervision of electronic computer programming. Quality control plans and procedures were developed and supervised by Herman H. Fasteau, assisted by George Minton and Alfred J. McKeon. Scheduling, progress reporting, and related staff work were supervised by Wilbur J. Mathias and Margaret R. Rommel.

How To Use This Publication

The number of manufacturing plants is presented in State, county, and industry sequence, by employment size. A brief description of each of these elements is given below to assist the reader in using the tables which follow:

1. The States are arranged in groups which conform to the Census Bureau regional groupings used in other Census publications. Only the Continental U.S. is included in this report. Alaska and Hawaii are not included since they did not achieve Statehood until 1959. The Census regional-State sequence is shown below:

New England	West North Central	West South Central
Maine	Minnesota	Arkansas
New Hampshire	Iowa	Louisiana
Vermont	Missouri	Oklahoma
Massachusetts	North Dakota	Texas
Rhode Island	South Dakota	
Connecticut	Nebraska	
	Kansas	

Middle Atlantic	South Atlantic	Mountain
New York	Delaware	Montana
New Jersey	Maryland	Idaho
Pennsylvania	District of Columbia	Wyoming
	Virginia	Colorado
	West Virginia	New Mexico
	North Carolina	Arizona
	South Carolina	Utah
	Georgia	Nevada
	Florida	

East North Central	East South Central	Pacific
Ohio	Kentucky	Washington
Indiana	Tennessee	Oregon
Illinois	Alabama	California
Michigan	Mississippi	
Wisconsin		

2. All counties having one or more manufacturing plants appear in alphabetical sequence within each State. Related statistics for the county (such as employment, payroll, man-hours, value added by manufacture and capital expenditures) are available in the 1958 Census of Manufactures, Volume III, Area Statistics.

3. The industries included in this report appear in the "Standard Industrial Classification" (4-digit code) sequence, as published in the 1958 Census of Manufactures. A full description of each industry, its processes, and its products appears in Volume II, Industry Statistics, of the 1958 Census. In addition, a convenient summary description of each industry appears in Appendix A of Volume I, Summary Statistics, and Volume III, Area Statistics. A detailed explanation of the background, procedures, and concepts in taking the census may be found in the Introduction of any of the 1958 Census of Manufactures volumes.

4. The employment size class assigned to each plant is based on the "average" 1958 employment total reported by the plant. Both "production workers" and "all other employees" at the manufacturing plant are included in this total figure. The plant employment figure is composed of an average of four monthly figures (March, May, August, and November) for "production workers" plus the March figure for "all other employees." The employment size classes do not, therefore, represent "maximum" or "anticipated" employment size but are approximations to the annual average for 1958.

5. Average employment by industry-employment size class—As an aid in using the data in this release, average employment figures were calculated (based on data previously published in 1958 Census of Manufactures reports) for each industry-employment size class. These figures are shown in the Appendix to this report.

APPENDIX

Average Employment by Industry and Size Class for Industry Groups

(The figures shown in the table below were derived from employment and establishment figures previously published in the 1958 Census of Manufactures industry report table, "Selected Statistics for Manufacturing Establishments, Classified by Employment Size." These averages were compiled to serve as an aid in using and interpreting the size class statistics shown in this report.

Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted, and the combined figure has been underlined and shown in the size class to the left. The underlined average employment figure, therefore, represents an average for two or more size classes)

Code	Industry	Average employment per establishment for--							
		All establishments	Plants with--						
			1-19 employees	20-49 employees	50-99 employees	100-249 employees	250-499 employees	500-999 employees	1,000 or more employees

FINAL REPORTS OF THE 1958 CENSUS OF MANUFACTURES

AREA REPORTS--Each report contains an introductory text and the following data for each State or area for 1958: statistics on value of shipments, value added by manufacture, employment, payrolls, man-hours, new capital expenditures, and number of manufacturing establishments for important industries and industry groups, with historical comparisons. For the State's important metropolitan statistical areas and larger counties, similar data are shown by industry groups. Totals for all manufacturing industries are shown for the items listed above (except value of shipments) for all counties, standard metropolitan statistical areas, and cities with 10,000 or more population. The number of establishments in each major industry group is presented by size of establishment within county. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

INDUSTRY REPORTS--Each report contains an introductory text and data for groups of related manufacturing industries showing for each industry for 1958: statistics on detailed product shipments and materials consumption in terms of quantity and value, cost of fuels and electric energy, value added by manufacture, employment, payrolls, man-hours, inventories, new capital expenditures, and number of manufacturing establishments. Selected statistics are included for earlier census years. Value of shipments, cost of materials, capital expenditures, and employment and payroll data are shown for each industry by geographic region and State. Number of employees, value added by manufacture, and number of establishments are shown by size class of establishment within industry. Data are provided on selected measures for specialized product plants. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

SUBJECT REPORTS--Each report contains introductory text and detailed statistics for an individual subject, such as size of establishments, inventories, new capital expenditures, fuels and electric energy, and important materials consumed.

VOLUMES--The Industry, Area, and Subject reports described above will be assembled and issued as three separately bound volumes, together with full explanatory texts and appendixes. In addition, there will be a general summary chapter in each of the volumes, summary statistics chapters for major industry groups in the Industry Volume, and summary statistics chapters for geographic divisions in the Area Volume.

SPECIAL REPORTS--In addition to the reports described above, a series of special reports will also be issued. These reports will cover: the number of manufacturing plants classified by 4-digit industry, county, and employment size; indexes of physical volume of production; and other subjects to be announced at a later date.

Library of Congress Card No. A61-9403

SUGGESTED CITATION

U. S. Bureau of the Census. *U. S. Census of Manufactures: 1958.*
Location of manufacturing plants by county, industry, and employment size,
Part 5.--South Atlantic States, Special Report MC58(S)-3.5.
U. S. Government Printing Office, Washington, D. C., 1961

Foreword

This series of publications presents Census information for each of approximately 3,100 different counties, showing in detail the 4-digit Standard Industrial Classification code and employment size class of each manufacturing plant in the specified industry. The series consists of 9 separate reports each of which encompasses all of the States and counties in one of the 9 Census geographic divisions. Previously, another series of reports, also in nine parts, presented the same information arranged by industry with State and county as the subordinate classification structure.

In the Census volumes, actual figures on employment and other measures cannot be published in such area-industry-size precision without disclosing figures for individual companies. Accordingly, these two series of publications fill in many of the data gaps necessarily arising in the regular 1958 Census of Manufactures published tables. For many analytical purposes, aggregates are not needed. Instead, the detailed count of manufacturing plants in this publication, cross classified by county, industry, and size provides a revealing picture that will be useful to: (a) those involved in economic development programs at the regional, State, and local area levels; (b) those engaged in industrial market analyses or allocation of sales territories; and (c) those concerned with industrial dispersion, regional shifts of industry, and similar problems.

Acknowledgments

The nine parts of this report constitute an addition to the series initiated with the publication of the Location of Manufacturing Plants data in industry by county sequence based on the 1954 Census of Manufactures. It was followed by a similar set of releases based on the 1958 Census of Manufactures. This is the first time, however, that the data are being published in county by industry sequence. The Area Redevelopment Administration has provided the necessary financial assistance for making possible the publication of the 1958 data in county by industry sequence.

The Location of Manufacturing Plants reports for 1958 were prepared by the Bureau of the Census from the basic computer records which had been used for the standard Census Industry and Area reports. These "Location" reports were planned and readied for publication in the Industry Division under the general supervision of Irving Rottenberg by Arthur W. Horowitz, Chief, Establishment Statistics. The review of the 1958 industry and geographic data for completeness and accuracy was a division-wide effort with the bulk of the work performed in the following commodity areas: Foods, Edward A. Robinson, Chief; Textiles, Milton Eisen, Chief; Apparel, Shirley Kallek, Chief; Lumber and Furniture, Elmer S. Biles, Chief; Paper, Printing, and Publishing, Edward D. Gruen, Chief; Chemicals, Reese R. Morgan, Chief; Metal and Metal Products, Paul F. Berard, Chief; Machinery, William R. Gray, Chief; and Electrical Machinery and Transportation Equipment, Bernard P. Bernsten, Chief. The Foods, Textiles, and Apparel areas were under the general supervision of Willis K. Jordan; the Lumber, Paper, and Chemicals area under Cyril M. Wildes; and the Metals, Machinery, and Transportation Equipment industries under Clarence H. Olsen. The application of the system of the industrial classification of establishments was coordinated by Irvin Strauss in the later stages of the census and by Isidore Bogdanoff during the earlier period. Staff assistance in statistical methods and sampling was provided by Jack L. Ogus, Assistant Division Chief for Research and Methodology.

Processing of the Census of Manufactures reports was performed in the Economic Operations Division under the supervision of Irving Weiss, Assistant Chief, Processing, assisted by Max E. Van Horn, Charles Merzel, Donald E. Young, and Wesley R. Grier. Systems and procedures were developed under the supervision of Sol Dolleck, Assistant Chief, Systems, assisted by Samuel Schweid on methods evaluation and determination, Jack Margolis on liaison and systems development, Nathan Lesowitz on development and preparation of operating procedures, and Jack Scharff, assisted by Eugene L. Wendt, on the development and supervision of electronic computer programming. Quality control plans and procedures were developed and supervised by Herman H. Fasteau, assisted by George Minton and Alfred J. McKeon. Scheduling, progress reporting, and related staff work were supervised by Wilbur J. Mathias and Margaret R. Rommel.

How To Use This Publication

The number of manufacturing plants is presented in State, county, and industry sequence, by employment size. A brief description of each of these elements is given below to assist the reader in using the tables which follow:

1. The States are arranged in groups which conform to the Census Bureau regional groupings used in other Census publications. Only the Continental U.S. is included in this report. Alaska and Hawaii are not included since they did not achieve Statehood until 1959. The Census regional-State sequence is shown below:

New England	West North Central	West South Central
Maine	Minnesota	Arkansas
New Hampshire	Iowa	Louisiana
Vermont	Missouri	Oklahoma
Massachusetts	North Dakota	Texas
Rhode Island	South Dakota	
Connecticut	Nebraska	
	Kansas	

Middle Atlantic	South Atlantic	Mountain
New York	Delaware	Montana
New Jersey	Maryland	Idaho
Pennsylvania	District of Columbia	Wyoming
	Virginia	Colorado
	West Virginia	New Mexico
	North Carolina	Arizona
	South Carolina	Utah
	Georgia	Nevada
	Florida	

East North Central	East South Central	Pacific
Ohio	Kentucky	Washington
Indiana	Tennessee	Oregon
Illinois	Alabama	California
Michigan	Mississippi	
Wisconsin		

2. All counties having one or more manufacturing plants appear in alphabetical sequence within each State. Related statistics for the county (such as employment, payroll, man-hours, value added by manufacture and capital expenditures) are available in the 1958 Census of Manufactures, Volume III, Area Statistics.

3. The industries included in this report appear in the "Standard Industrial Classification" (4-digit code) sequence, as published in the 1958 Census of Manufactures. A full description of each industry, its processes, and its products appears in Volume II, Industry Statistics, of the 1958 Census. In addition, a convenient summary description of each industry appears in Appendix A of Volume I, Summary Statistics, and Volume III, Area Statistics. A detailed explanation of the background, procedures, and concepts in taking the census may be found in the Introduction of any of the 1958 Census of Manufactures volumes.

4. The employment size class assigned to each plant is based on the "average" 1958 employment total reported by the plant. Both "production workers" and "all other employees" at the manufacturing plant are included in this total figure. The plant employment figure is composed of an average of four monthly figures (March, May, August, and November) for "production workers" plus the March figure for "all other employees." The employment size classes do not, therefore, represent "maximum" or "anticipated" employment size but are approximations to the annual average for 1958.

5. Average employment by industry-employment size class—As an aid in using the data in this release, average employment figures were calculated (based on data previously published in 1958 Census of Manufactures reports) for each industry-employment size class. These figures are shown in the Appendix to this report.

APPENDIX

Average Employment by Industry and Size Class for Industry Groups

(The figures shown in the table below were derived from employment and establishment figures previously published in the 1958 Census of Manufactures industry report table, "Selected Statistics for Manufacturing Establishments, Classified by Employment Size." These averages were compiled to serve as an aid in using and interpreting the size class statistics shown in this report.

Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted, and the combined figure has been underlined and shown in the size class to the left. The underlined average employment figure, therefore, represents an average for two or more size classes)

Code	Industry	Average employment per establishment for--							
		All establishments	Plants with--						
			1-19 employees	20-49 employees	50-99 employees	100-249 employees	250-499 employees	500-999 employess	1,000 or more employees
20	FOOD AND KINDRED PRODUCTS:

FINAL REPORTS OF THE 1958 CENSUS OF MANUFACTURES

AREA REPORTS--Each report contains an introductory text and the following data for each State or area for 1958: statistics on value of shipments, value added by manufacture, employment, payrolls, man-hours, new capital expenditures, and number of manufacturing establishments for important industries and industry groups, with historical comparisons. For the State's important metropolitan statistical areas and larger counties, similar data are shown by industry groups. Totals for all manufacturing industries are shown for the items listed above (except value of shipments) for all counties, standard metropolitan statistical areas, and cities with 10,000 or more population. The number of establishments in each major industry group is presented by size of establishment within county. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

INDUSTRY REPORTS--Each report contains an introductory text and data for groups of related manufacturing industries showing for each industry for 1958: statistics on detailed product shipments and materials consumption in terms of quantity and value, cost of fuels and electric energy, value added by manufacture, employment, payrolls, man-hours, inventories, new capital expenditures, and number of manufacturing establishments. Selected statistics are included for earlier census years. Value of shipments, cost of materials, capital expenditures, and employment and payroll data are shown for each industry by geographic region and State. Number of employees, value added by manufacture, and number of establishments are shown by size class of establishment within industry. Data are provided on selected measures for specialized product plants. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

SUBJECT REPORTS--Each report contains introductory text and detailed statistics for an individual subject, such as size of establishments, inventories, new capital expenditures, fuels and electric energy, and important materials consumed.

VOLUMES--The Industry, Area, and Subject reports described above will be assembled and issued as three separately bound volumes, together with full explanatory texts and appendixes. In addition, there will be a general summary chapter in each of the volumes, summary statistics chapters for major industry groups in the Industry Volume, and summary statistics chapters for geographic divisions in the Area Volume.

SPECIAL REPORTS--In addition to the reports described above, a series of special reports will also be issued. These reports will cover: the number of manufacturing plants classified by 4-digit industry, county, and employment size; indexes of physical volume of production; and other subjects to be announced at a later date.

Library of Congress Card No. A61-9403

SUGGESTED CITATION

U. S. Bureau of the Census. *U. S. Census of Manufactures: 1958.*
Location of manufacturing plants by county, industry, and employment size,
Part 6.--East South Central States, Special Report MC58(S)-3.6.
U. S. Government Printing Office, Washington, D. C., 1961

Foreword

This series of publications presents Census information for each of approximately 3,100 different counties, showing in detail the 4-digit Standard Industrial Classification code and employment size class of each manufacturing plant in the specified industry. The series consists of 9 separate reports each of which encompasses all of the States and counties in one of the 9 Census geographic divisions. Previously, another series of reports, also in nine parts, presented the same information arranged by industry with State and county as the subordinate classification structure.

In the Census volumes, actual figures on employment and other measures cannot be published in such area-industry-size precision without disclosing figures for individual companies. Accordingly, these two series of publications fill in many of the data gaps necessarily arising in the regular 1958 Census of Manufactures published tables. For many analytical purposes, aggregates are not needed. Instead, the detailed count of manufacturing plants in this publication, cross classified by county, industry, and size provides a revealing picture that will be useful to: (a) those involved in economic development programs at the regional, State, and local area levels; (b) those engaged in industrial market analyses or allocation of sales territories; and (c) those concerned with industrial dispersion, regional shifts of industry, and similar problems.

Acknowledgments

The nine parts of this report constitute an addition to the series initiated with the publication of the Location of Manufacturing Plants data in industry by county sequence based on the 1954 Census of Manufactures. It was followed by a similar set of releases based on the 1958 Census of Manufactures. This is the first time, however, that the data are being published in county by industry sequence. The Area Redevelopment Administration has provided the necessary financial assistance for making possible the publication of the 1958 data in county by industry sequence.

The Location of Manufacturing Plants reports for 1958 were prepared by the Bureau of the Census from the basic computer records which had been used for the standard Census Industry and Area reports. These "Location" reports were planned and readied for publication in the Industry Division under the general supervision of Irving Rottenberg by Arthur W. Horowitz, Chief, Establishment Statistics. The review of the 1958 industry and geographic data for completeness and accuracy was a division-wide effort with the bulk of the work performed in the following commodity areas: Foods, Edward A. Robinson, Chief; Textiles, Milton Eisen, Chief; Apparel, Shirley Kallek, Chief; Lumber and Furniture, Elmer S. Biles, Chief; Paper, Printing, and Publishing, Edward D. Gruen, Chief; Chemicals, Reese R. Morgan, Chief; Metal and Metal Products, Paul F. Berard, Chief; Machinery, William R. Gray, Chief; and Electrical Machinery and Transportation Equipment, Bernard P. Bernsten, Chief. The Foods, Textiles, and Apparel areas were under the general supervision of Willis K. Jordan; the Lumber, Paper, and Chemicals area under Cyril M. Wildes; and the Metals, Machinery, and Transportation Equipment industries under Clarence H. Olsen. The application of the system of the industrial classification of establishments was coordinated by Irvin Strauss in the later stages of the census and by Isidore Bogdanoff during the earlier period. Staff assistance in statistical methods and sampling was provided by Jack L. Ogus, Assistant Division Chief for Research and Methodology.

Processing of the Census of Manufactures reports was performed in the Economic Operations Division under the supervision of Irving Weiss, Assistant Chief, Processing, assisted by Max E. Van Horn, Charles Merzel, Donald E. Young, and Wesley R. Grier. Systems and procedures were developed under the supervision of Sol Dolleck, Assistant Chief, Systems, assisted by Samuel Schweid on methods evaluation and determination, Jack Margolis on liaison and systems development, Nathan Lesowitz on development and preparation of operating procedures, and Jack Scharff, assisted by Eugene L. Wendt, on the development and supervision of electronic computer programming. Quality control plans and procedures were developed and supervised by Herman H. Fasteau, assisted by George Minton and Alfred J. McKeon. Scheduling, progress reporting, and related staff work were supervised by Wilbur J. Mathias and Margaret R. Rommel.

How To Use This Publication

The number of manufacturing plants is presented in State, county, and industry sequence, by employment size. A brief description of each of these elements is given below to assist the reader in using the tables which follow:

1. The States are arranged in groups which conform to the Census Bureau regional groupings used in other Census publications. Only the Continental U.S. is included in this report. Alaska and Hawaii are not included since they did not achieve Statehood until 1959. The Census regional-State sequence is shown below:

New England
- Maine
- New Hampshire
- Vermont
- Massachusetts
- Rhode Island
- Connecticut

Middle Atlantic
- New York
- New Jersey
- Pennsylvania

East North Central
- Ohio
- Indiana
- Illinois
- Michigan
- Wisconsin

West North Central
- Minnesota
- Iowa
- Missouri
- North Dakota
- South Dakota
- Nebraska
- Kansas

South Atlantic
- Delaware
- Maryland
- District of Columbia
- Virginia
- West Virginia
- North Carolina
- South Carolina
- Georgia
- Florida

East South Central
- Kentucky
- Tennessee
- Alabama
- Mississippi

West South Central
- Arkansas
- Louisiana
- Oklahoma
- Texas

Mountain
- Montana
- Idaho
- Wyoming
- Colorado
- New Mexico
- Arizona
- Utah
- Nevada

Pacific
- Washington
- Oregon
- California

2. All counties having one or more manufacturing plants appear in alphabetical sequence within each State. Related statistics for the county (such as employment, payroll, man-hours, value added by manufacture and capital expenditures) are available in the 1958 Census of Manufactures, Volume III, Area Statistics.

3. The industries included in this report appear in the "Standard Industrial Classification" (4-digit code) sequence, as published in the 1958 Census of Manufactures. A full description of each industry, its processes, and its products appears in Volume II, Industry Statistics, of the 1958 Census. In addition, a convenient summary description of each industry appears in Appendix A of Volume I, Summary Statistics, and Volume III, Area Statistics. A detailed explanation of the background, procedures, and concepts in taking the census may be found in the Introduction of any of the 1958 Census of Manufactures volumes.

4. The employment size class assigned to each plant is based on the "average" 1958 employment total reported by the plant. Both "production workers" and "all other employees" at the manufacturing plant are included in this total figure. The plant employment figure is composed of an average of four monthly figures (March, May, August, and November) for "production workers" plus the March figure for "all other employees." The employment size classes do not, therefore, represent "maximum" or "anticipated" employment size but are approximations to the annual average for 1958.

5. Average employment by industry-employment size class—As an aid in using the data in this release, average employment figures were calculated (based on data previously published in 1958 Census of Manufactures reports) for each industry-employment size class. These figures are shown in the Appendix to this report.

APPENDIX

Average Employment by Industry and Size Class for Industry Groups

(The figures shown in the table below were derived from employment and establishment figures previously published in the 1958 Census of Manufactures industry report table, "Selected Statistics for Manufacturing Establishments, Classified by Employment Size." These averages were compiled to serve as an aid in using and interpreting the size class statistics shown in this report.

Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted, and the combined figure has been underlined and shown in the size class to the left. The underlined average employment figure, therefore, represents an average for two or more size classes)

Code	Industry	Average employment per establishment for--							
		All establishments	Plants with--						
			1-19 employees	20-49 employees	50-99 employees	100-249 employees	250-499 employees	500-999 employess	1,000 or more employees
20	FOOD AND KINDRED PRODUCTS:								
2011	Meat packing plants	72	5	32	69	154	366	687	2,105
2013	Prepared meats	33	7	31	72	151	349	728	(D)

FINAL REPORTS OF THE 1958 CENSUS OF MANUFACTURES

AREA REPORTS--Each report contains an introductory text and the following data for each State or area for 1958: statistics on value of shipments, value added by manufacture, employment, payrolls, man-hours, new capital expenditures, and number of manufacturing establishments for important industries and industry groups, with historical comparisons. For the State's important metropolitan statistical areas and larger counties, similar data are shown by industry groups. Totals for all manufacturing industries are shown for the items listed above (except value of shipments) for all counties, standard metropolitan statistical areas, and cities with 10,000 or more population. The number of establishments in each major industry group is presented by size of establishment within county. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

INDUSTRY REPORTS--Each report contains an introductory text and data for groups of related manufacturing industries showing for each industry for 1958: statistics on detailed product shipments and materials consumption in terms of quantity and value, cost of fuels and electric energy, value added by manufacture, employment, payrolls, man-hours, inventories, new capital expenditures, and number of manufacturing establishments. Selected statistics are included for earlier census years. Value of shipments, cost of materials, capital expenditures, and employment and payroll data are shown for each industry by geographic region and State. Number of employees, value added by manufacture, and number of establishments are shown by size class of establishment within industry. Data are provided on selected measures for specialized product plants. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

SUBJECT REPORTS--Each report contains introductory text and detailed statistics for an individual subject, such as size of establishments, inventories, new capital expenditures, fuels and electric energy, and important materials consumed.

VOLUMES--The Industry, Area, and Subject reports described above will be assembled and issued as three separately bound volumes, together with full explanatory texts and appendixes. In addition, there will be a general summary chapter in each of the volumes, summary statistics chapters for major industry groups in the Industry Volume, and summary statistics chapters for geographic divisions in the Area Volume.

SPECIAL REPORTS--In addition to the reports described above, a series of special reports will also be issued. These reports will cover: the number of manufacturing plants classified by 4-digit industry, county, and employment size; indexes of physical volume of production; and other subjects to be announced at a later date.

Library of Congress Card No. A61-9403

SUGGESTED CITATION

U. S. Bureau of the Census. *U. S. Census of Manufactures: 1958.*
Location of manufacturing plants by county, industry, and employment size,
Part 7.--West South Central States, Special Report MC58(S)-3.7.
U. S. Government Printing Office, Washington, D. C., 1961

Foreword

This series of publications presents Census information for each of approximately 3,100 different counties, showing in detail the 4-digit Standard Industrial Classification code and employment size class of each manufacturing plant in the specified industry. The series consists of 9 separate reports each of which encompasses all of the States and counties in one of the 9 Census geographic divisions. Previously, another series of reports, also in nine parts, presented the same information arranged by industry with State and county as the subordinate classification structure.

In the Census volumes, actual figures on employment and other measures cannot be published in such area-industry-size precision without disclosing figures for individual companies. Accordingly, these two series of publications fill in many of the data gaps necessarily arising in the regular 1958 Census of Manufactures published tables. For many analytical purposes, aggregates are not needed. Instead, the detailed count of manufacturing plants in this publication, cross classified by county, industry, and size provides a revealing picture that will be useful to: (a) those involved in economic development programs at the regional, State, and local area levels; (b) those engaged in industrial market analyses or allocation of sales territories; and (c) those concerned with industrial dispersion, regional shifts of industry, and similar problems.

Acknowledgments

The nine parts of this report constitute an addition to the series initiated with the publication of the Location of Manufacturing Plants data in industry by county sequence based on the 1954 Census of Manufactures. It was followed by a similar set of releases based on the 1958 Census of Manufactures. This is the first time, however, that the data are being published in county by industry sequence. The Area Redevelopment Administration has provided the necessary financial assistance for making possible the publication of the 1958 data in county by industry sequence.

The Location of Manufacturing Plants reports for 1958 were prepared by the Bureau of the Census from the basic computer records which had been used for the standard Census Industry and Area reports. These "Location" reports were planned and readied for publication in the Industry Division under the general supervision of Irving Rottenberg by Arthur W. Horowitz, Chief, Establishment Statistics. The review of the 1958 industry and geographic data for completeness and accuracy was a division-wide effort with the bulk of the work performed in the following commodity areas: Foods, Edward A. Robinson, Chief; Textiles, Milton Eisen, Chief; Apparel, Shirley Kallek, Chief; Lumber and Furniture, Elmer S. Biles, Chief; Paper, Printing, and Publishing, Edward D. Gruen, Chief; Chemicals, Reese R. Morgan, Chief; Metal and Metal Products, Paul F. Berard, Chief; Machinery, William R. Gray, Chief; and Electrical Machinery and Transportation Equipment, Bernard P. Bernsten, Chief. The Foods, Textiles, and Apparel areas were under the general supervision of Willis K. Jordan; the Lumber, Paper, and Chemicals area under Cyril M. Wildes; and the Metals, Machinery, and Transportation Equipment industries under Clarence H. Olsen. The application of the system of the industrial classification of establishments was coordinated by Irvin Strauss in the later stages of the census and by Isidore Bogdanoff during the earlier period. Staff assistance in statistical methods and sampling was provided by Jack L. Ogus, Assistant Division Chief for Research and Methodology.

Processing of the Census of Manufactures reports was performed in the Economic Operations Division under the supervision of Irving Weiss, Assistant Chief, Processing, assisted by Max E. Van Horn, Charles Merzel, Donald E. Young, and Wesley R. Grier. Systems and procedures were developed under the supervision of Sol Dolleck, Assistant Chief, Systems, assisted by Samuel Schweid on methods evaluation and determination, Jack Margolis on liaison and systems development, Nathan Lesowitz on development and preparation of operating procedures, and Jack Scharff, assisted by Eugene L. Wendt, on the development and supervision of electronic computer programming. Quality control plans and procedures were developed and supervised by Herman H. Fasteau, assisted by George Minton and Alfred J. McKeon. Scheduling, progress reporting, and related staff work were supervised by Wilbur J. Mathias and Margaret R. Rommel.

How To Use This Publication

The number of manufacturing plants is presented in State, county, and industry sequence, by employment size. A brief description of each of these elements is given below to assist the reader in using the tables which follow:

1. The States are arranged in groups which conform to the Census Bureau regional groupings used in other Census publications. Only the Continental U.S. is included in this report. Alaska and Hawaii are not included since they did not achieve Statehood until 1959. The Census regional-State sequence is shown below:

New England	West North Central	West South Central
Maine	Minnesota	Arkansas
New Hampshire	Iowa	Louisiana
Vermont	Missouri	Oklahoma
Massachusetts	North Dakota	Texas
Rhode Island	South Dakota	
Connecticut	Nebraska	
	Kansas	

Middle Atlantic	South Atlantic	Mountain
New York	Delaware	Montana
New Jersey	Maryland	Idaho
Pennsylvania	District of Columbia	Wyoming
	Virginia	Colorado
	West Virginia	New Mexico
	North Carolina	Arizona
	South Carolina	Utah
	Georgia	Nevada
	Florida	

East North Central	East South Central	Pacific
Ohio	Kentucky	Washington
Indiana	Tennessee	Oregon
Illinois	Alabama	California
Michigan	Mississippi	
Wisconsin		

2. All counties having one or more manufacturing plants appear in alphabetical sequence within each State. Related statistics for the county (such as employment, payroll, man-hours, value added by manufacture and capital expenditures) are available in the 1958 Census of Manufactures, Volume III, Area Statistics.

3. The industries included in this report appear in the "Standard Industrial Classification" (4-digit code) sequence, as published in the 1958 Census of Manufactures. A full description of each industry, its processes, and its products appears in Volume II, Industry Statistics, of the 1958 Census. In addition, a convenient summary description of each industry appears in Appendix A of Volume I, Summary Statistics, and Volume III, Area Statistics. A detailed explanation of the background, procedures, and concepts in taking the census may be found in the Introduction of any of the 1958 Census of Manufactures volumes.

4. The employment size class assigned to each plant is based on the "average" 1958 employment total reported by the plant. Both "production workers" and "all other employees" at the manufacturing plant are included in this total figure. The plant employment figure is composed of an average of four monthly figures (March, May, August, and November) for "production workers" plus the March figure for "all other employees." The employment size classes do not, therefore, represent "maximum" or "anticipated" employment size but are approximations to the annual average for 1958.

5. Average employment by industry-employment size class—As an aid in using the data in this release, average employment figures were calculated (based on data previously published in 1958 Census of Manufactures reports) for each industry-employment size class. These figures are shown in the Appendix to this report.

APPENDIX

Average Employment by Industry and Size Class for Industry Groups

(The figures shown in the table below were derived from employment and establishment figures previously published in the 1958 Census of Manufactures industry report table, "Selected Statistics for Manufacturing Establishments, Classified by Employment Size." These averages were compiled to serve as an aid in using and interpreting the size class statistics shown in this report.

Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted, and the combined figure has been underlined and shown in the size class to the left. The underlined average employment figure, therefore, represents an average for two or more size classes)

Code	Industry	Average employment per establishment for--							
		All establishments	Plants with--						
			1-19 employees	20-49 employees	50-99 employees	100-249 employees	250-499 employees	500-999 employess	1,000 or more employees

FINAL REPORTS OF THE 1958 CENSUS OF MANUFACTURES

AREA REPORTS--Each report contains an introductory text and the following data for each State or area for 1958: statistics on value of shipments, value added by manufacture, employment, payrolls, man-hours, new capital expenditures, and number of manufacturing establishments for important industries and industry groups, with historical comparisons. For the State's important metropolitan statistical areas and larger counties, similar data are shown by industry groups. Totals for all manufacturing industries are shown for the items listed above (except value of shipments) for all counties, standard metropolitan statistical areas, and cities with 10,000 or more population. The number of establishments in each major industry group is presented by size of establishment within county. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

INDUSTRY REPORTS--Each report contains an introductory text and data for groups of related manufacturing industries showing for each industry for 1958: statistics on detailed product shipments and materials consumption in terms of quantity and value, cost of fuels and electric energy, value added by manufacture, employment, payrolls, man-hours, inventories, new capital expenditures, and number of manufacturing establishments. Selected statistics are included for earlier census years. Value of shipments, cost of materials, capital expenditures, and employment and payroll data are shown for each industry by geographic region and State. Number of employees, value added by manufacture, and number of establishments are shown by size class of establishment within industry. Data are provided on selected measures for specialized product plants. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

SUBJECT REPORTS--Each report contains introductory text and detailed statistics for an individual subject, such as size of establishments, inventories, new capital expenditures, fuels and electric energy, and important materials consumed.

VOLUMES--The Industry, Area, and Subject reports described above will be assembled and issued as three separately bound volumes, together with full explanatory texts and appendixes. In addition, there will be a general summary chapter in each of the volumes, summary statistics chapters for major industry groups in the Industry Volume, and summary statistics chapters for geographic divisions in the Area Volume.

SPECIAL REPORTS--In addition to the reports described above, a series of special reports will also be issued. These reports will cover: the number of manufacturing plants classified by 4-digit industry, county, and employment size; indexes of physical volume of production; and other subjects to be announced at a later date.

Library of Congress Card No. A61-9403

SUGGESTED CITATION

U. S. Bureau of the Census. *U. S. Census of Manufactures: 1958.*
Location of manufacturing plants by county, industry, and employment size,
Part 8.--Mountain States, Special Report MC58(S)-3.8.
U. S. Government Printing Office, Washington, D. C., 1961

Foreword

This series of publications presents Census information for each of approximately 3,100 different counties, showing in detail the 4-digit Standard Industrial Classification code and employment size class of each manufacturing plant in the specified industry. The series consists of 9 separate reports each of which encompasses all of the States and counties in one of the 9 Census geographic divisions. Previously, another series of reports, also in nine parts, presented the same information arranged by industry with State and county as the subordinate classification structure.

In the Census volumes, actual figures on employment and other measures cannot be published in such area-industry-size precision without disclosing figures for individual companies. Accordingly, these two series of publications fill in many of the data gaps necessarily arising in the regular 1958 Census of Manufactures published tables. For many analytical purposes, aggregates are not needed. Instead, the detailed count of manufacturing plants in this publication, cross classified by county, industry, and size provides a revealing picture that will be useful to: (a) those involved in economic development programs at the regional, State, and local area levels; (b) those engaged in industrial market analyses or allocation of sales territories; and (c) those concerned with industrial dispersion, regional shifts of industry, and similar problems.

Acknowledgments

The nine parts of this report constitute an addition to the series initiated with the publication of the Location of Manufacturing Plants data in industry by county sequence based on the 1954 Census of Manufactures. It was followed by a similar set of releases based on the 1958 Census of Manufactures. This is the first time, however, that the data are being published in county by industry sequence. The Area Redevelopment Administration has provided the necessary financial assistance for making possible the publication of the 1958 data in county by industry sequence.

The Location of Manufacturing Plants reports for 1958 were prepared by the Bureau of the Census from the basic computer records which had been used for the standard Census Industry and Area reports. These "Location" reports were planned and readied for publication in the Industry Division under the general supervision of Irving Rottenberg by Arthur W. Horowitz, Chief, Establishment Statistics. The review of the 1958 industry and geographic data for completeness and accuracy was a division-wide effort with the bulk of the work performed in the following commodity areas: Foods, Edward A. Robinson, Chief; Textiles, Milton Eisen, Chief; Apparel, Shirley Kallek, Chief; Lumber and Furniture, Elmer S. Biles, Chief; Paper, Printing, and Publishing, Edward D. Gruen, Chief; Chemicals, Reese R. Morgan, Chief; Metal and Metal Products, Paul F. Berard, Chief; Machinery, William R. Gray, Chief; and Electrical Machinery and Transportation Equipment, Bernard P. Bernsten, Chief. The Foods, Textiles, and Apparel areas were under the general supervision of Willis K. Jordan; the Lumber, Paper, and Chemicals area under Cyril M. Wildes; and the Metals, Machinery, and Transportation Equipment industries under Clarence H. Olsen. The application of the system of the industrial classification of establishments was coordinated by Irvin Strauss in the later stages of the census and by Isidore Bogdanoff during the earlier period. Staff assistance in statistical methods and sampling was provided by Jack L. Ogus, Assistant Division Chief for Research and Methodology.

Processing of the Census of Manufactures reports was performed in the Economic Operations Division under the supervision of Irving Weiss, Assistant Chief, Processing, assisted by Max E. Van Horn, Charles Merzel, Donald E. Young, and Wesley R. Grier. Systems and procedures were developed under the supervision of Sol Dolleck, Assistant Chief, Systems, assisted by Samuel Schweid on methods evaluation and determination, Jack Margolis on liaison and systems development, Nathan Lesowitz on development and preparation of operating procedures, and Jack Scharff, assisted by Eugene L. Wendt, on the development and supervision of electronic computer programming. Quality control plans and procedures were developed and supervised by Herman H. Fasteau, assisted by George Minton and Alfred J. McKeon. Scheduling, progress reporting, and related staff work were supervised by Wilbur J. Mathias and Margaret R. Rommel.

How To Use This Publication

The number of manufacturing plants is presented in State, county, and industry sequence, by employment size. A brief description of each of these elements is given below to assist the reader in using the tables which follow:

1. The States are arranged in groups which conform to the Census Bureau regional groupings used in other Census publications. Only the Continental U.S. is included in this report. Alaska and Hawaii are not included since they did not achieve Statehood until 1959. The Census regional-State sequence is shown below:

New England	West North Central	West South Central
Maine	Minnesota	Arkansas
New Hampshire	Iowa	Louisiana
Vermont	Missouri	Oklahoma
Massachusetts	North Dakota	Texas
Rhode Island	South Dakota	
Connecticut	Nebraska	
	Kansas	

Middle Atlantic	South Atlantic	Mountain
New York	Delaware	Montana
New Jersey	Maryland	Idaho
Pennsylvania	District of Columbia	Wyoming
	Virginia	Colorado
	West Virginia	New Mexico
	North Carolina	Arizona
	South Carolina	Utah
	Georgia	Nevada
	Florida	

East North Central	East South Central	Pacific
Ohio	Kentucky	Washington
Indiana	Tennessee	Oregon
Illinois	Alabama	California
Michigan	Mississippi	
Wisconsin		

2. All counties having one or more manufacturing plants appear in alphabetical sequence within each State. Related statistics for the county (such as employment, payroll, man-hours, value added by manufacture and capital expenditures) are available in the 1958 Census of Manufactures, Volume III, Area Statistics.

3. The industries included in this report appear in the "Standard Industrial Classification" (4-digit code) sequence, as published in the 1958 Census of Manufactures. A full description of each industry, its processes, and its products appears in Volume II, Industry Statistics, of the 1958 Census. In addition, a convenient summary description of each industry appears in Appendix A of Volume I, Summary Statistics, and Volume III, Area Statistics. A detailed explanation of the background, procedures, and concepts in taking the census may be found in the Introduction of any of the 1958 Census of Manufactures volumes.

4. The employment size class assigned to each plant is based on the "average" 1958 employment total reported by the plant. Both "production workers" and "all other employees" at the manufacturing plant are included in this total figure. The plant employment figure is composed of an average of four monthly figures (March, May, August, and November) for "production workers" plus the March figure for "all other employees." The employment size classes do not, therefore, represent "maximum" or "anticipated" employment size but are approximations to the annual average for 1958.

5. Average employment by industry-employment size class—As an aid in using the data in this release, average employment figures were calculated (based on data previously published in 1958 Census of Manufactures reports) for each industry-employment size class. These figures are shown in the Appendix to this report.

APPENDIX

Average Employment by Industry and Size Class for Industry Groups

(The figures shown in the table below were derived from employment and establishment figures previously published in the 1958 Census of Manufactures industry report table, "Selected Statistics for Manufacturing Establishments, Classified by Employment Size." These averages were compiled to serve as an aid in using and interpreting the size class statistics shown in this report.

Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted, and the combined figure has been underlined and shown in the size class to the left. The underlined average employment figure, therefore, represents an average for two or more size classes)

Code	Industry	Average employment per establishment for--							
		All establishments	Plants with--						
			1-19 employees	20-49 employees	50-99 employees	100-249 employees	250-499 employees	500-999 employess	1,000 or more employees
20	FOOD AND KINDRED PRODUCTS:

FINAL REPORTS OF THE 1958 CENSUS OF MANUFACTURES

AREA REPORTS--Each report contains an introductory text and the following data for each State or area for 1958: statistics on value of shipments, value added by manufacture, employment, payrolls, man-hours, new capital expenditures, and number of manufacturing establishments for important industries and industry groups, with historical comparisons. For the State's important metropolitan statistical areas and larger counties, similar data are shown by industry groups. Totals for all manufacturing industries are shown for the items listed above (except value of shipments) for all counties, standard metropolitan statistical areas, and cities with 10,000 or more population. The number of establishments in each major industry group is presented by size of establishment within county. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

INDUSTRY REPORTS--Each report contains an introductory text and data for groups of related manufacturing industries showing for each industry for 1958: statistics on detailed product shipments and materials consumption in terms of quantity and value, cost of fuels and electric energy, value added by manufacture, employment, payrolls, man-hours, inventories, new capital expenditures, and number of manufacturing establishments. Selected statistics are included for earlier census years. Value of shipments, cost of materials, capital expenditures, and employment and payroll data are shown for each industry by geographic region and State. Number of employees, value added by manufacture, and number of establishments are shown by size class of establishment within industry. Data are provided on selected measures for specialized product plants. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

SUBJECT REPORTS--Each report contains introductory text and detailed statistics for an individual subject, such as size of establishments, inventories, new capital expenditures, fuels and electric energy, and important materials consumed.

VOLUMES--The Industry, Area, and Subject reports described above will be assembled and issued as three separately bound volumes, together with full explanatory texts and appendixes. In addition, there will be a general summary chapter in each of the volumes, summary statistics chapters for major industry groups in the Industry Volume, and summary statistics chapters for geographic divisions in the Area Volume.

SPECIAL REPORTS--In addition to the reports described above, a series of special reports will also be issued. These reports will cover: the number of manufacturing plants classified by 4-digit industry, county, and employment size; indexes of physical volume of production; and other subjects to be announced at a later date.

Library of Congress Card No. A61-9403

SUGGESTED CITATION

U. S. Bureau of the Census. *U. S. Census of Manufactures: 1958.*
Location of manufacturing plants by county, industry, and employment size,
Part 9.--Pacific States, Special Report MC58(S)-3.9.
U. S. Government Printing Office, Washington, D. C., 1961

Foreword

This series of publications presents Census information for each of approximately 3,100 different counties, showing in detail the 4-digit Standard Industrial Classification code and employment size class of each manufacturing plant in the specified industry. The series consists of 9 separate reports each of which encompasses all of the States and counties in one of the 9 Census geographic divisions. Previously, another series of reports, also in nine parts, presented the same information arranged by industry with State and county as the subordinate classification structure.

In the Census volumes, actual figures on employment and other measures cannot be published in such area-industry-size precision without disclosing figures for individual companies. Accordingly, these two series of publications fill in many of the data gaps necessarily arising in the regular 1958 Census of Manufactures published tables. For many analytical purposes, aggregates are not needed. Instead, the detailed count of manufacturing plants in this publication, cross classified by county, industry, and size provides a revealing picture that will be useful to: (a) those involved in economic development programs at the regional, State, and local area levels; (b) those engaged in industrial market analyses or allocation of sales territories; and (c) those concerned with industrial dispersion, regional shifts of industry, and similar problems.

Acknowledgments

The nine parts of this report constitute an addition to the series initiated with the publication of the Location of Manufacturing Plants data in industry by county sequence based on the 1954 Census of Manufactures. It was followed by a similar set of releases based on the 1958 Census of Manufactures. This is the first time, however, that the data are being published in county by industry sequence. The Area Redevelopment Administration has provided the necessary financial assistance for making possible the publication of the 1958 data in county by industry sequence.

The Location of Manufacturing Plants reports for 1958 were prepared by the Bureau of the Census from the basic computer records which had been used for the standard Census Industry and Area reports. These "Location" reports were planned and readied for publication in the Industry Division under the general supervision of Irving Rottenberg by Arthur W. Horowitz, Chief, Establishment Statistics. The review of the 1958 industry and geographic data for completeness and accuracy was a division-wide effort with the bulk of the work performed in the following commodity areas: Foods, Edward A. Robinson, Chief; Textiles, Milton Eisen, Chief; Apparel, Shirley Kallek, Chief; Lumber and Furniture, Elmer S. Biles, Chief; Paper, Printing, and Publishing, Edward D. Gruen, Chief; Chemicals, Reese R. Morgan, Chief; Metal and Metal Products, Paul F. Berard, Chief; Machinery, William R. Gray, Chief; and Electrical Machinery and Transportation Equipment, Bernard P. Bernsten, Chief. The Foods, Textiles, and Apparel areas were under the general supervision of Willis K. Jordan; the Lumber, Paper, and Chemicals area under Cyril M. Wildes; and the Metals, Machinery, and Transportation Equipment industries under Clarence H. Olsen. The application of the system of the industrial classification of establishments was coordinated by Irvin Strauss in the later stages of the census and by Isidore Bogdanoff during the earlier period. Staff assistance in statistical methods and sampling was provided by Jack L. Ogus, Assistant Division Chief for Research and Methodology.

Processing of the Census of Manufactures reports was performed in the Economic Operations Division under the supervision of Irving Weiss, Assistant Chief, Processing, assisted by Max E. Van Horn, Charles Merzel, Donald E. Young, and Wesley R. Grier. Systems and procedures were developed under the supervision of Sol Dolleck, Assistant Chief, Systems, assisted by Samuel Schweid on methods evaluation and determination, Jack Margolis on liaison and systems development, Nathan Lesowitz on development and preparation of operating procedures, and Jack Scharff, assisted by Eugene L. Wendt, on the development and supervision of electronic computer programming. Quality control plans and procedures were developed and supervised by Herman H. Fasteau, assisted by George Minton and Alfred J. McKeon. Scheduling, progress reporting, and related staff work were supervised by Wilbur J. Mathias and Margaret R. Rommel.

How To Use This Publication

The number of manufacturing plants is presented in State, county, and industry sequence, by employment size. A brief description of each of these elements is given below to assist the reader in using the tables which follow:

1. The States are arranged in groups which conform to the Census Bureau regional groupings used in other Census publications. Only the Continental U.S. is included in this report. Alaska and Hawaii are not included since they did not achieve Statehood until 1959. The Census regional-State sequence is shown below:

New England	West North Central	West South Central
Maine	Minnesota	Arkansas
New Hampshire	Iowa	Louisiana
Vermont	Missouri	Oklahoma
Massachusetts	North Dakota	Texas
Rhode Island	South Dakota	
Connecticut	Nebraska	
	Kansas	

Middle Atlantic	South Atlantic	Mountain
New York	Delaware	Montana
New Jersey	Maryland	Idaho
Pennsylvania	District of Columbia	Wyoming
	Virginia	Colorado
	West Virginia	New Mexico
	North Carolina	Arizona
	South Carolina	Utah
	Georgia	Nevada
	Florida	

East North Central	East South Central	Pacific
Ohio	Kentucky	Washington
Indiana	Tennessee	Oregon
Illinois	Alabama	California
Michigan	Mississippi	
Wisconsin		

2. All counties having one or more manufacturing plants appear in alphabetical sequence within each State. Related statistics for the county (such as employment, payroll, man-hours, value added by manufacture and capital expenditures) are available in the 1958 Census of Manufactures, Volume III, Area Statistics.

3. The industries included in this report appear in the "Standard Industrial Classification" (4-digit code) sequence, as published in the 1958 Census of Manufactures. A full description of each industry, its processes, and its products appears in Volume II, Industry Statistics, of the 1958 Census. In addition, a convenient summary description of each industry appears in Appendix A of Volume I, Summary Statistics, and Volume III, Area Statistics. A detailed explanation of the background, procedures, and concepts in taking the census may be found in the Introduction of any of the 1958 Census of Manufactures volumes.

4. The employment size class assigned to each plant is based on the "average" 1958 employment total reported by the plant. Both "production workers" and "all other employees" at the manufacturing plant are included in this total figure. The plant employment figure is composed of an average of four monthly figures (March, May, August, and November) for "production workers" plus the March figure for "all other employees." The employment size classes do not, therefore, represent "maximum" or "anticipated" employment size but are approximations to the annual average for 1958.

5. Average employment by industry-employment size class—As an aid in using the data in this release, average employment figures were calculated (based on data previously published in 1958 Census of Manufactures reports) for each industry-employment size class. These figures are shown in the Appendix to this report.

APPENDIX

Average Employment by Industry and Size Class for Industry Groups

(The figures shown in the table below were derived from employment and establishment figures previously published in the 1958 Census of Manufactures industry report table, "Selected Statistics for Manufacturing Establishments, Classified by Employment Size." These averages were compiled to serve as an aid in using and interpreting the size class statistics shown in this report.

Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted, and the combined figure has been underlined and shown in the size class to the left. The underlined average employment figure, therefore, represents an average for two or more size classes)

Code	Industry	Average employment per establishment for--							
		All establishments	Plants with--						
			1-19 employees	20-49 employees	50-99 employees	100-249 employees	250-499 employees	500-999 employess	1,000 or more employees
20	FOOD AND KINDRED PRODUCTS:								
2011	Meat packing plants	72	5	32	69	154	366	687	2,105
